

Office 365 Onboarding Center

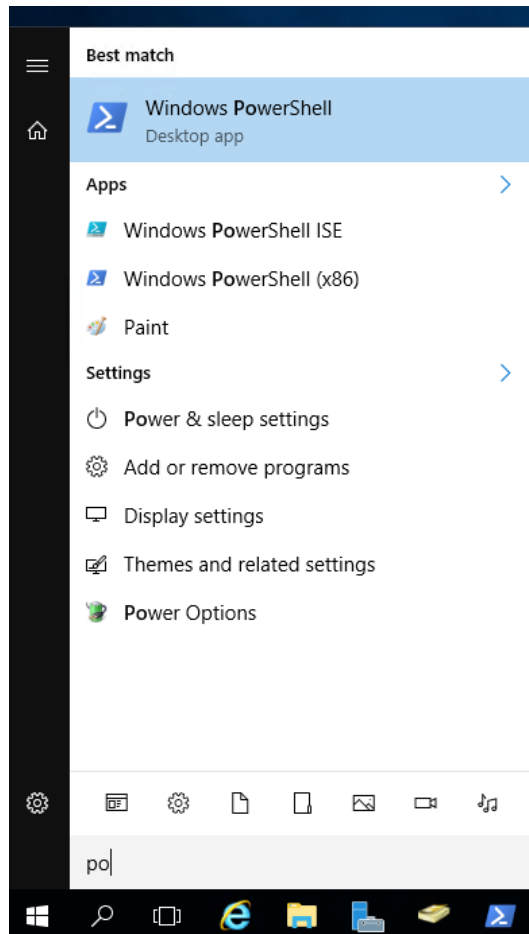

Exchange Migration Questionnaire Validation

Prerequisite

- Powershell (available in Windows 10, 8.1 and 8)
- Supported Browsers
- Questionnaire must be fully completed (including users and passwords)

Environment preparation

Verify Powershell is present in the computer:

Press the “Windows Button” in the taskbar and without pressing in anything start typing “PowerShell” if it is installed it should show up, if it does not show up you may need to install it:

Install [Powershell and all prerequisite](#)

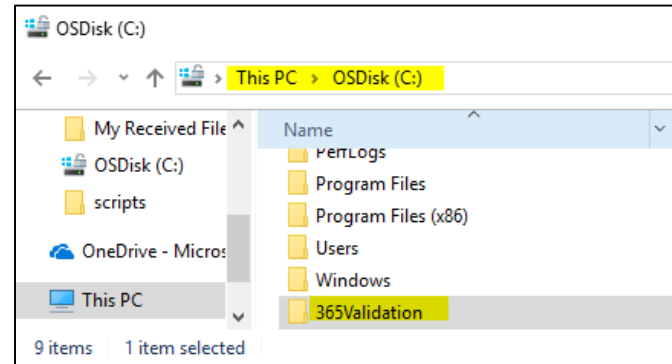

Environment preparation

Ensure that you follow the steps:

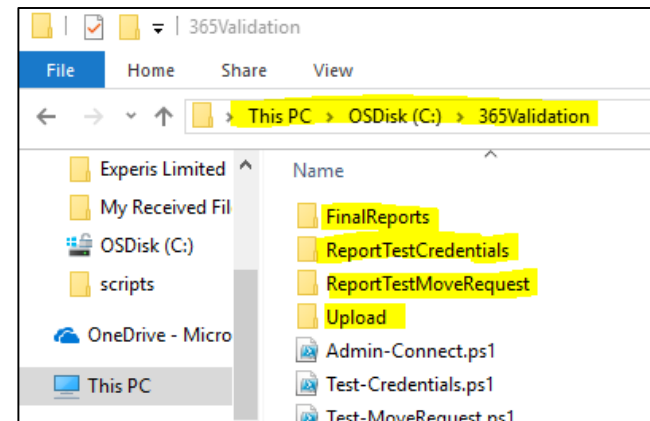

1 - **Download** these **365Validation.zip** file and extract the content of the file into the drive **C:**

2 – Verify that in **C:** you have the folder **365Validation** as shown:

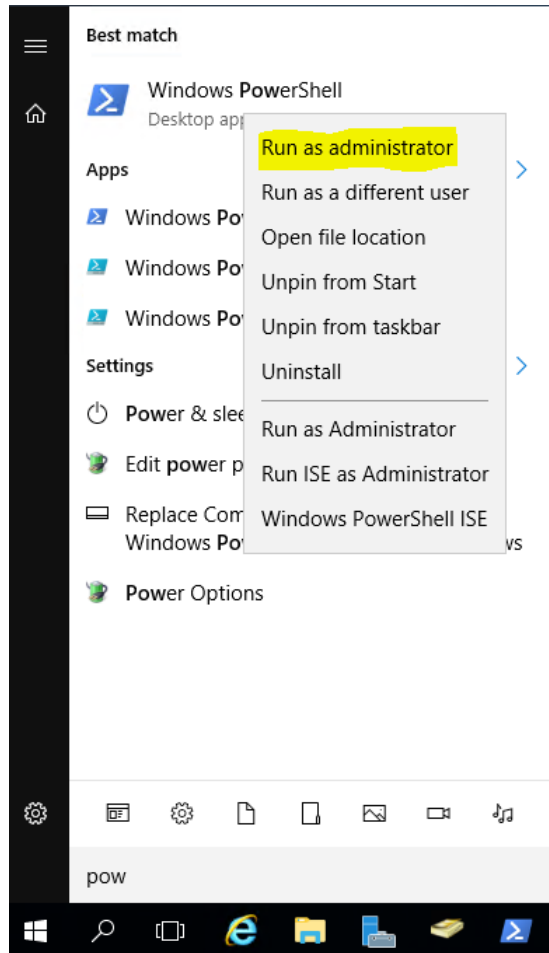

3 – Verify that in **C:\365Validation** folder you **have the content as shown**:

Environment preparation - 2

Please open the link

Run Powershell as an Administrator

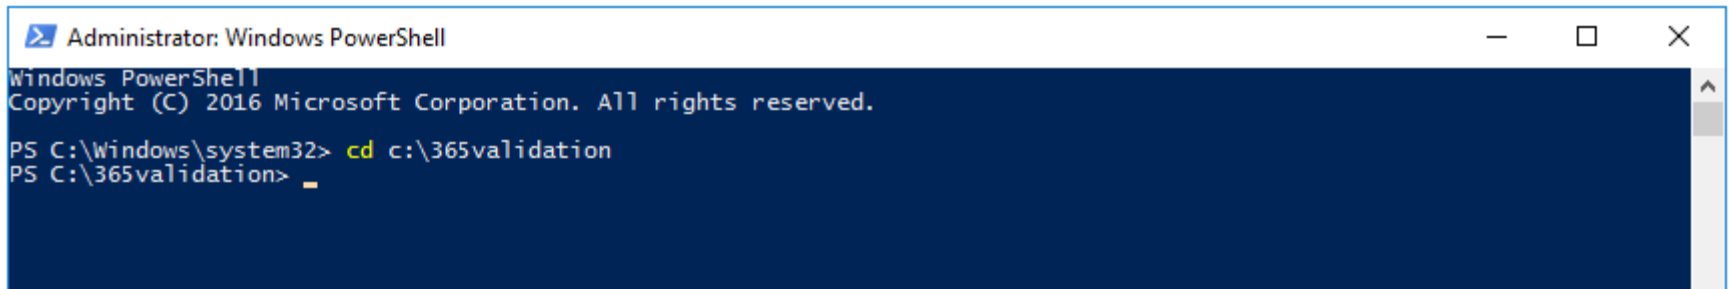

Press the "Windows Button" in the taskbar and without pressing in anything start typing "PowerShell" then right click on it and select "Run as administrator"

Validation Preparation

Using the same PowerShell session Copy and Paste the line bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

```
cd c:\365validation
```

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) 2016 Microsoft Corporation. All rights reserved.

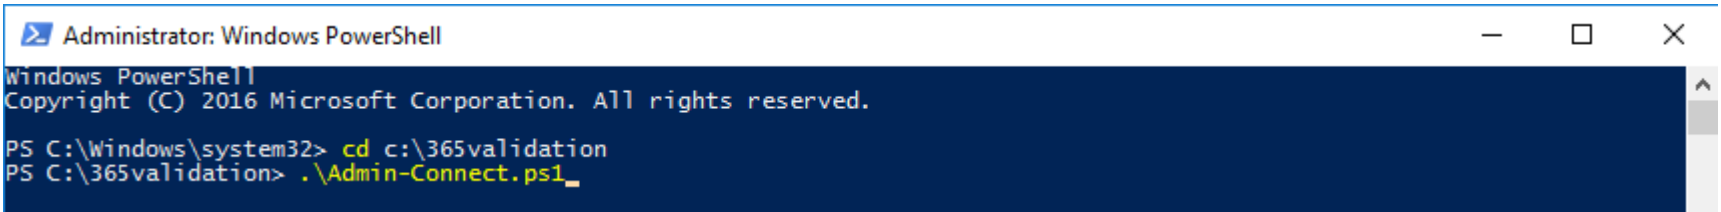

PS C:\Windows\system32> cd c:\365validation
PS C:\365validation> _
```

Info: This command will move the PowerShell execution to the folder c:\365validation

Validation Preparation Part 3

Copy and Paste the lines bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

.\Admin-Connect.ps1

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) 2016 Microsoft Corporation. All rights reserved.

PS C:\Windows\system32> cd c:\365validation
PS C:\365validation> .\Admin-Connect.ps1
```

A Popup window will show up, please enter Online Admin credentials in the respective fields

Info: This will store the username and password of a Online Admin into memory to use in future script running

Test Online Admin Accounts Part1

Edit the file `passwords.csv` stored in `C:\365validation\upload` by opening Notepad and opening the file.

Do not change the first row

On the following rows enter the Online Admin username and password that have been shared with you by the customer separated by a comma, one set per row.

When finished save the file , **Do not change the file name or location**

Eg.

UserName,Password

admin1@domain.com,password

admin2@domain.com,password

admin2@domain.com,password

Test Online Admin Accounts Part2

Copy and Paste the line bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

.\Test-Credentials.ps1

A screenshot of a PowerShell terminal window with a dark blue background. The text displayed is 'PS C:\365validation> .\Test-Credentials.ps1' followed by a cursor. The text is in a light green/yellow monospace font.

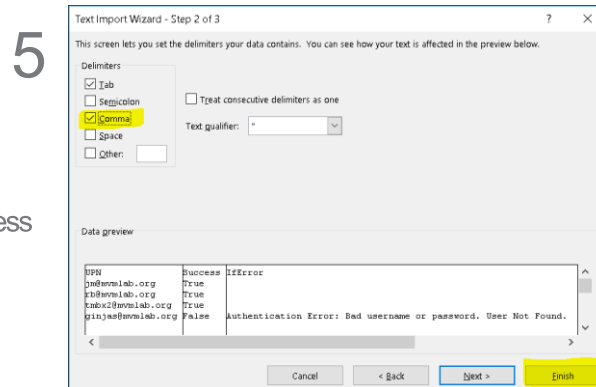

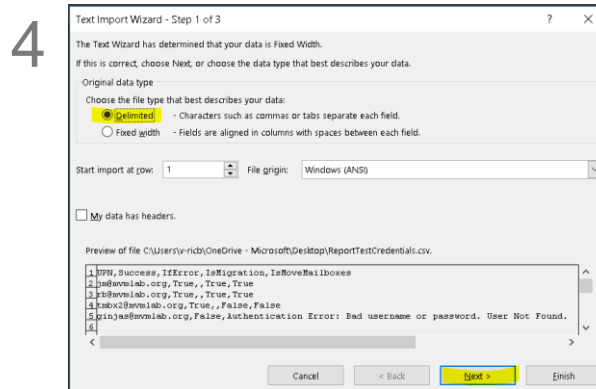

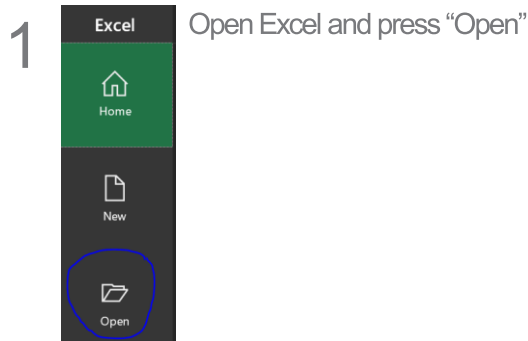

```
PS C:\365validation> .\Test-Credentials.ps1_
```

Info: This command will run the script test-credentials.ps1, that will test the Online Admin accounts provided by the customer in the Migration Questionnaire

Test Online Admin Accounts Part3

PowerShell will perform some actions, please ignore them, once the script finishes running the results will be stored in a file:

The results of the Online Admin credentials verification are stored in a file called stored in **C:\365Validation\FinalReports\ReportTestCredentials.csv**, you can verify the results by accessing opening Excel in your computer and performing the following steps:

Test Online Admin Accounts Part4

The results will be shown in a similar way to the example bellow:

The File is composed by 5 Columns:

UPN	Success	IfError	IsMigration	IsMoveMailboxes
[REDACTED]	TRUE		TRUE	TRUE
[REDACTED]	TRUE		TRUE	TRUE
[REDACTED]	TRUE		FALSE	FALSE
[REDACTED]	FALSE	Authentication Error: Bad username or password. User Not Found. User: [REDACTED]	FALSE	FALSE

UPN: The admin that was tested

Success: "True "or "False "are the expected results, if "True" the access to the customers Office 365 tenant was successful, if "False " it was not

IfError: In case in the column "Success" the value is "False" this column will describe the motive for the failure

IsMigration and IsMoveMailboxes: These two columns identify if the admins have the minimum required roles to perform the migrations, the value "True" or "False" are expected, if "True" the Admin has that specific role if false the admins does not have that role

Test Online Admin Part5

In case of error or as an alternative to the PowerShell method above you may test the Online Admin accounts by accessing the Office 365 Portal in <http://portal.office.com>, if successful the credential are OK if not successful credential are not correct

Please use in private browsing, depending on the browser this can be achieved in different ways:

Edge: <https://support.microsoft.com/en-us/help/4026200/windows-browse-inprivate-in-microsoft-edge>

Internet Explorer: <https://www.howtogeek.com/howto/windows-vista/open-ies-private-browsing-mode-the-easy-way/>

Chrome: <https://support.google.com/chromebook/answer/95464?co=GENIE.Platform%3DDesktop&hl=en>

Firefox: <https://support.mozilla.org/en-US/kb/private-browsing-use-firefox-without-history>

Test the Test Mailboxes Part1

Edit the file **identities.csv** stored in **C:\365validation\upload** by opening Notepad and opening the file.

Do not change the first row;

On the following rows enter the test accounts that have been shared with you in the migration questionnaire, one per row.

Test mailboxes	Please provide 10 Test Mailboxes to test the Migration tools/Scripts for Velocity Migrations	These Test Mailboxes need to be posted to the customer SPO site in the Migration Schedule Template format for Exchange Hybrid Migrations. The Test mailboxes naming convention -	
----------------	--	--	--

When finished save the file , **Do not change the file name or location**

Eg.

PrimarySMTPAddress

TestMigMBX1

TestMigMBX2

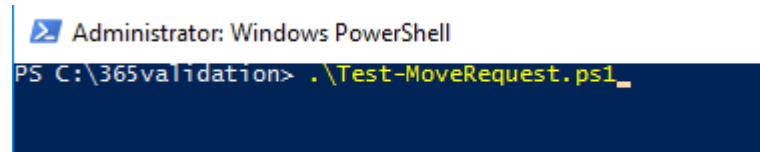

TestMigMBX3

TestMigMBX4

Test the Test Mailboxes Part2

Copy and Paste the line bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

.\Test-MoveRequest.ps1

```
Administrator: Windows PowerShell
PS C:\365validation> .\Test-MoveRequest.ps1_
```

PowerShell will perform some actions, please ignore them, once the script finishes running the results will be stored in a file:

Info: this command will read from the identities.csv file and verify if it's content is a recipient in Office 365 and if the migration is expected to succeed, and if not the reason why

Test the Test Mailboxes Part2

The results of the Test Mailboxes verification s are stored in a file called stored in **C:\365Validation\FinalReports\ReportTestMoveRequest.csv**, you can verify the results by accessing opening Excel in your computer and performing the following steps:

1 Open Excel and press “Open”

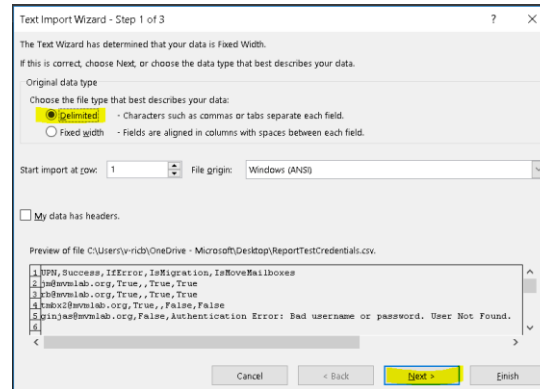

2 Press “Browse” and navigate to **C:\365Validation\FinalReports**

3 Select the file and press “Open”

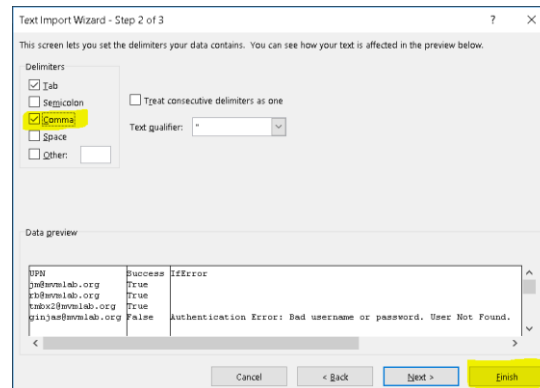

4

A pop up windows will appear in it select “Delimited” and press “Next”

5

A pop up new windows will appear in it select “comma” and press “Finish”

The Results will appear in an Excel spreadsheet (Continue in the next slide)

Test the Test Mailboxes Part3

The results will be shown in a similar way to the example bellow:

The File is composed by 3 Columns:

PrimarySMTPAddress	Success	IfError
TestMigMBX2	YES	
TestMigMBX3	YES	
TestMigMBX1	NO	The target mailbox doesn't have an SMTP proxy matching 'TestMigMBX1.mail.onmicrosoft.com'.
TestMigMBX4	NO	The operation couldn't be performed because object 'TestMigMBX4' couldn't be found on 'HE1P193A001DC02.EURP193A001.PROD.OUTLOOK.COM'.

Primary SMTPAddress: The accounts offered for testing

Success: "Yes" or "No" are the expected results, if "Yes" the mailbox is correctly created and migratable, if "No" there is an issue with the mailbox

IfError: In case in the column "Success" the value is "No" this column will describe the motive

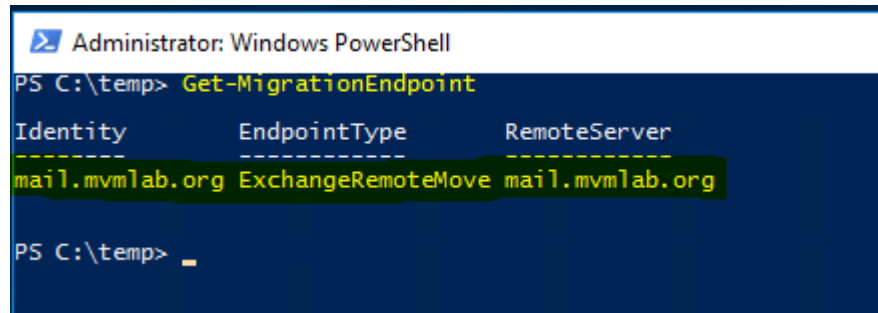

Note: For further information about the errors, the cause and possible solution please refer to the file **Exchange Hybrid Migration issues.xlsx** present in root of the folder 365Validation that you have been using.

Test Migration EndPoint Part1

Copy and Paste the lines bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

Get-MigrationEndpoint

Info: This will show you the available endpoints created in the customer's tenant, this way you may confirm that the value the customer shared is correct

```
Administrator: Windows PowerShell
PS C:\temp> Get-MigrationEndpoint

Identity            EndpointType          RemoteServer
-----
mail.mvmlab.org     ExchangeRemoteMove   mail.mvmlab.org

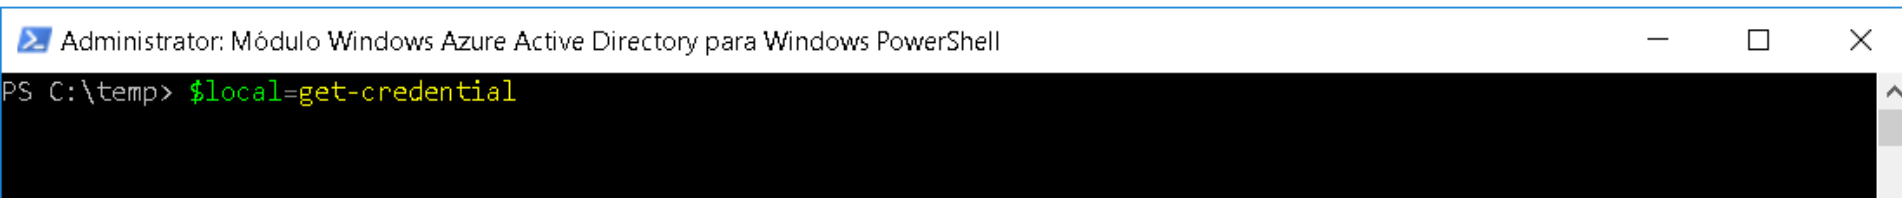

PS C:\temp> _
```

Test Migration EndPoint Part2

Copy and Paste the lines bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

\$local = get-credential

Info: This will put in the variable \$local the username and password of a Local Admin

```
Administrator: Módulo Windows Azure Active Directory para Windows PowerShell
PS C:\temp> $local=get-credential
```

A Popup window will show up, please enter a Local Admin credentials in the respective fields

Test Migration EndPoint Part3

Copy and Paste the line bellow and press enter, note to paste in PowerShell CTRL+V does not work, you must right click and then it pastes:

Test-MigrationServerAvailability -ExchangeRemoteMove -RemoteServer "remote server"-Credentials \$local

Replace "remote server" with the information shared in the migration questionnaire in the line with the same name.

It is expected to get a successful result

Migration Setting Details	Remote Hostname	premise. This is the external name (such as https://migration.contoso.com) that points to the the internal Hybrid Servers or a common Load Balancer IP in front of them.	
	Target Delivery Domain	e.g *.mail.onmicrosoft.com	
	Large item Limit (maximum number of large items that are allowed before the migration request fails)	Suggested Value = 0.	
	Bad-Item Limit (maximum number of bad items that are allowed before the migration request fails)	Suggested Value = 50	

```
Select Administrator: Windows PowerShell
PS C:\temp> Test-MigrationServerAvailability -ExchangeRemoteMove -RemoteServer mail.mvmlab.org -Credentials $credential

RunspaceId      : 18bdf5a6-974f-425f-b44d-9f1dafc57404
Result          : Success
Message         :
ConnectionSettings : <ExchangeConnectionSettings HasAdminPrivilege="True" HasAutodiscovery="False" HasMrsProxy="True"
AutodiscoverUrl="" IncomingEmailAddress="" IncomingRPCProxyServer="mail.mvmlab.org"
IncomingExchangeServer="mail.mvmlab.org" IncomingNSPIServer="" IncomingDomain=""
IncomingUserName="rb@mvm1lab.org" EncryptedIncomingPassword="AAAAAQAAAAEKBmfsLNC2h01FZm+36/hw8GCW
CGSAFlAwQCAQYJYIZIAWUBAIBBg1ghkgBZQMEAQIEIJERYU3bu1hTD+CdkZ54bEjJH7EXiwRMJ/wSj75b9TmYB8DEHzL6yPx
YY8pJAKSHcUJIECDHRXgVOrSBuy3lIXpitCt+wVsmTsF4Mcw5NFP4tcwccB6MwfntdEKTnbQ0pjCZyFw86UU3UYTYoj4j81l
xF" IncomingAuthentication="Basic" ServerVersion="" TargetDomainName="" SourceMailboxLegDn=""
PublicFolderDatabaseServerLegacyDN="" IsPublicFolderMailboxesMigrationSource="False" />
SupportsCutover  : False
ErrorDetail      :
IsValid         : True
Identity        :
ObjectState      : New
```

After a mailbox is migrated verify the

```
user@contoso.com | Get-Recipient
```

```
PS C:\Users\a-rascau> Get-recipient
```

Name	RecipientType
admin	UserMailbox
alexandrucojocar	UserMailbox
ancacojocar	UserMailbox
anca	UserMailbox
Angela Scaueru	UserMailbox
angela	UserMailbox
DiscoverySearchMailbox{D919BA05-46A6-415f-80AD-7E09334BB852}	UserMailbox
Radu Scaueru	UserMailbox
radu	UserMailbox

```
Get-mailbox raduscaueru | get-mailboxstatistics | ft displayname,totalitemsizes
```

```
PS C:\Users\a-rascau> Get-mailbox raduscaueru | get-mailboxstatistics | ft displayname,totalitemsizes
```

DisplayName	TotalItemSize
Radu Scaueru	3.479 MB (3,648,346 bytes)

Get total info (per folder)

```
Get-mailbox sumit.sarda@etgworld.com | Get-MailboxFolderStatistics | epcsv -  
Delimiter "`t" ~\desktop\sumit.csv -NoTypeInfoInformation -Encoding unicode
```

Test migration move (no change will be performed ! If using WhatIf)

Now you are good to go and can simulate the move request creation with a simple PowerShell command:

```
New-MoveRequest -Remote -RemoteHostName "mail.contoso.com" -RemoteCredential $LocalCred -Identity "user@contoso.com" -  
TargetDeliveryDomain "contoso.mail.onmicrosoft.com" -WhatIf  
  
New-MoveRequest -Remote -RemoteHostName "Webaccess.btg.com" -RemoteCredential $LocalCred -Identity "user@contoso.com" -  
TargetDeliveryDomain "spectrisplc.mail.onmicrosoft.com" -WhatIf
```

If the command above returns an error message, it will probably cast some light on what you should fix. If it simply returns a "what if" message, it means the mailbox is ok for migration.
